IS MOSQUITO FOGGING SAFE?

Research has found mosquito fogging poses no harm to humans or animals. People who live where mosquito spraying is routinely conducted have no more chemical related health problems than those in areas that are not sprayed.*

Research has also shown that, in areas with high rates of human disease, ULV (Ultra Low Volume) spraying reduces the rate of human infection immediately after application.

NR Pest uses only EPA-registered products for mosquito control.

**Mauer et al.2003,Karpati et al.2004,Currier et al.2005, Duprey et al 2008, Chung et al 2013.*

WHY FOG FOR MOSQUITOES?

You can be proactive against mosquitoes carrying West Nile virus, encephalitis, dengue, and chikungunya. Regularly scheduled mosquito fogging reduces the probability of disease transmission by infected mosquitoes and reduces liability.

HOW CAN I PROTECT MY ANIMALS AND MYSELF?

- Help control mosquitoes by removing standing water in house gutters and debris, such as old tires
- Do not allow water to stand too long or stagnate in birdbaths, pet bowls, flowerpots, wading pools, and other places where mosquitoes breed
- Vaccinate your horses

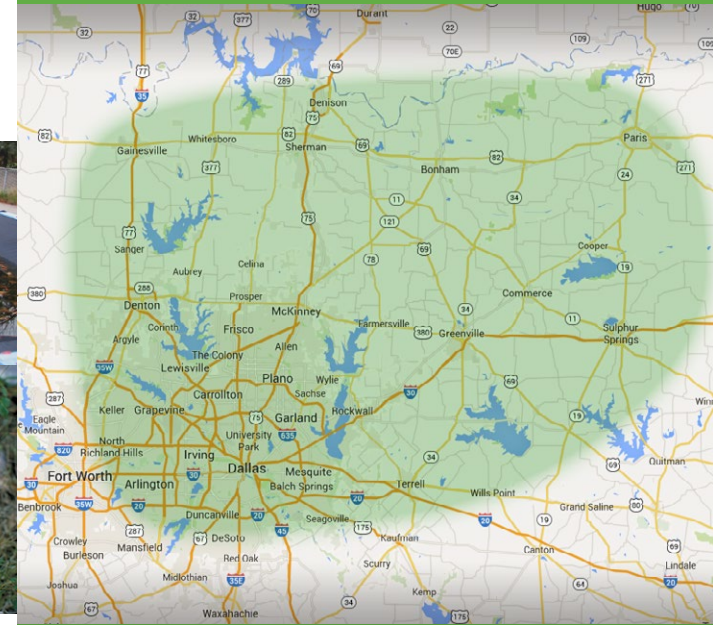

WEST NILE – HOW DOES IT SPREAD?

West Nile virus is spread by the bite of an infected mosquito and can infect people, horses, many types of birds, and some other animals. There is no evidence that West Nile virus can be spread from person to person or from animal to person.

WHO NEEDS MOSQUITO CONTROL?

- Large Cities
- Small Towns
- HOAs
- Rodeos
- Festivals
- Picnics
- Family Gatherings
- Golf Courses
- Horse Ranches
- Deer Breeding Operations
